

Father Time gets a face-lift thanks to SodaBlast Systems!

This testimonial and great story comes from an independent painting contractor who uses the SodaBlast system. Loveland Colorado has enjoyed a classic clock in its quaint downtown area for almost 100 years. The city of Loveland traces this clock back to 1910 from a Pennsylvania manufacturer, the Brown Street Clock Co. In order to update and care for this antique clock, they purchased it last fall.

Time and harsh weather had not been kind to this beautiful clock. It was tarnished, peeling paint and looking pretty drab. Amans Painting was contracted to clean the clock up by the Loveland Public Works Department. First task was to strip all the tarnish and years of damage away. SodaBlaster to the rescue!

Amans began blasting one evening and had it carefully stripped while preserving its delicate antique frame in just hours. They then began painting the antique clock in the colors believed to be its original "Bohemian black and white." After giving this old clock a face-lift, they updated it to run independently on batteries, which are switched out every six months by a Public Works Department staff member. With all the tender loving care of this restoration, city officials hope the clock will continue to be a historical part of this quaint downtown for many years to come.

If SodaBlast can strip a delicate 100 year old clock, imagine what it can do for you! Leading the blasting market for over six decades, SodaBlast Systems is family owned and proudly made in America. To find out more, log on to www.sodablastsystems.com or call them at 800-216-SODA.
